Virtual machine
Best for lower-traffic workloads, testing, or to control or highly customize apps, OS, or file system. If your workload or traffic starts to grow, a VM can later be attached to a Virtual Machine Scale Set (VMSS).

Virtual machine scale set (VMSS)
Built-in scaling, performance optimization, load balancing, and batch management for 1 to 1,000 VMs (no added cost). Include multiple VM sizes, zones, regions, and domains, along with discounted Spot VMs.

Presets
Create a pre-configured VM designed to optimize memory, capacity, or for general use. Deploy as-is, or customize as needed.

Hybrid, preconfigured, and high volume solutions
Explore pre-configured Starter kits for Linux and Windows, Azure Arc hybrid infrastructure solutions, and more.

Define network connectivity for your virtual machine by configuring network interface card (NIC) settings. You can control ports, inbound and outbound connectivity with security group rules, or place behind an existing load balancing solution.
Learn more

Network interface

When creating a virtual machine, a network interface will be created for you.

Virtual network: vnet01 (REGION-01)
Edit virtual network

Subnet *: subnet01
Edit subnet — 10.1.1.0 - 10.1.1.255 (256 addresses)

Public IP: (new) vm01-ip
Create new
Public IP addresses have a nominal charge. Estimate price

NIC network security group: None / Basic / Advanced

Public inbound ports *: None / Allow selected ports

Add peering

vnet01

Virtual network peering enables you to seamlessly connect two or more virtual networks in Azure. This will allow resources in either virtual network to directly connect and communicate with resources in the peered virtual network.

Remote virtual network summary

Peering link name * vnetustovnet01

I know my resource ID ☐

Subscription * Azure subscription 1

Virtual network * vnetus (central-region)

Remote virtual network peering settings

Allow 'vnetus' to access 'vnet01' ☑

Allow 'vnetus' to receive forwarded traffic from 'vnet01' ☐

Allow gateway or route server in 'vnetus' to forward traffic to 'vnet01' ☐
